

Useful for:

- Business Users, for uploading reporting data into SAS
- Data Owners, to keep track and sign off on the changes being made to their tables
- Auditors, to see who is changing the data, when, what the change was, etc
- SAS Developers - to automate data workflows based on manual inputs
- Data Quality - apply rules at source
- SAS Administrators - easily update control tables without locking datasets

Features:

- Role based security - editors, approvers, administrators
- Workflow - run a SAS program before or after an edit or approval
- Easy configuration of new data - just add table & security attributes
- CSV uploads
- SCD2 / Bitemporal support
- Composite / Retained key support
- Pass Through SQL for ACCESS engines

Cost:

- One-time fee (perpetual licence)
- Support packages available
- Price list available on request
