DataController

Secure & Auditable Data Workflows

- Would you like to enforce a "data contract" on your internal data providers?
- Do you need a faster / more flexibile alternative to building / deploying jobs every time a new CSV needs to be uploaded?
- Are you looking for a framework to manage inter-departmental “Data Workflows”?

Data Controller for SAS® is built to save time, reduce risk, improve auditability, and provide data accountability.

Contact *support@macropeople.com* for a free evaluation copy.

DataController

Useful for:

- Business Users - to load data directly into SAS
- Model Consumers - change some parameters and re-run a model
- Data Owners - to keep track and sign off on changes to tables
- Auditors - to view history of changes to data
- SAS Developers - to create automated data workflows
- Data Quality - apply rules at source
- Administrators - to update control tables without locks
- Business Analysts - trace data lineage
- ETL Developers - reduce the number of new jobs required

Features:

- Data Lineage - view impact analysis alongside transformation logic
- Workflow - run a SAS program before or after an edit or approval
- Role based security - editors, approvers, administrators
- New tables can be configured in seconds
- SCD2 / Bitemporal support
- Composite / Retained key support
- Pass Through SQL for ACCESS engines
- Email Alerts

- Direct Excel uploads - **coming soon**
- DDL generator - **coming soon**
- Data Dictionary - **coming soon**
- Frontend DQ rule configuration - **coming soon**
- Viya support - **coming soon**
